

Technical SEO report

Merchant demo / scan, fix, verify

9 September 2026

Technical SEO score

93 / 100

+1 point after the fix

Average across the 21 scanned targets. A technical-check score, not a measure of traffic, ranking or AI citations.

AI-readiness score

50 / 100

50 before and after the fix

A separate technical-check score for machine readability and access. It does not measure visibility or citations in AI answers.

21

Targets scanned

1

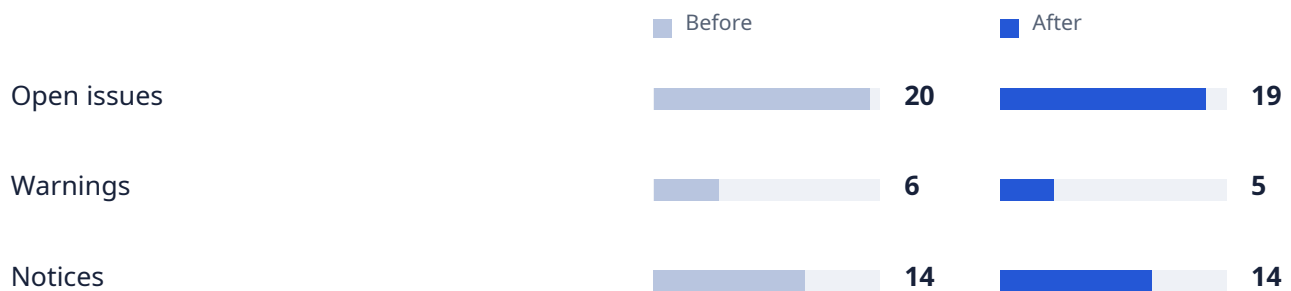

Issue fixed

19

Issues still open

Two scans. One verified fix.

Both scans completed all 21 targets with no failures. The second scan verified the saved description; no new issues were recorded.

THE VERIFIED CHANGE

A missing description, resolved.

A 142-character SEO description was saved for Post #5 in the free Filament editor. The next scan marked that exact issue as fixed. The other 19 findings remained open.

Findings & next steps

The 19 findings below are grouped by check. Counts describe issues, not unique affected pages. Record names and route paths identify the original demo targets.

Check	Count	Affected targets
Missing description Warning	1	Product #5
Long title Warning	3	Post #4; Product #1; Page #4
Long description Warning	1	Post #4
Short description Notice	8	Post #6; Product #2; Product #3; Product #4; Product #6; Product #7; Page #5; /products
Short title Notice	3	Page #2; /blog; /products
Short page body Notice	3	/; /blog; /products

Critical: 0 / Warnings: 5 / Notices: 14

Suggested next steps

01 Fill the remaining gap

Add a useful description to Product #5, then rescan to verify that the issue is resolved.

02 Review long metadata

Review the titles of Post #4, Product #1 and Page #4, plus Post #4's description. Keep the wording useful; length checks are editorial prompts, not ranking rules.

03 Assess the notices in context

Review the short titles, descriptions and page bodies for relevance and completeness. Avoid padding text just to pass a length check.

Evidence & limits

This redesigned companion summarizes the recorded scan and report evidence. It is not the default Pro PDF layout. The original local demo used Laravel 12 and Filament 4 with Rankbeam Core, the free editor and Pro. Only the two captured scans are compared; no earlier history was filled in. Local demonstration with seeded content. Captured 9 September 2026; redesigned and translated September 2026. Search Console and AI-bot logging were disabled. No traffic, ranking or citation results are claimed.
